'The Biggest Loser' Creator Is Making Another Weight-Loss Show

The Biggest Loser has been a popular show for years, but it faced some serious backlash last year after *The New York Times* profiled an explosive study that revealed the contestants' weight loss is often unsustainable and can actually harm their metabolisms. Now, *The Biggest Loser* creator J.D. Roth is working on a new show, *The Big Fat Truth*, in an attempt to find out why so many of his former stars regain the weight—and to help six of them who will appear on the show lose it again. (Roth will also try to help others lose weight as well.)

In a clip for the show obtained by *People*, Roth acknowledges the criticism around *The Biggest Loser*. "The *New York Times* published an article telling everyone that, 'You can't get away from a basic biological reality...as long as you are below your initial weight, your body is going to try to get you back.' Could this really be true? How do you get lucky enough to get a lottery ticket to try to get you back? Lose all the weight, end up on the cover of *People* magazine, and then gain it all back?" he says. "So is it your metabolism? Or is it your choices?"

In reality, the reasons why most *Biggest Loser* contestants gained the weight back are complex.

The article Roth references cited a study published in the journal *Obesity* in 2016, in which

Saleh Aldasouqi, M.D., Chief of the Division of Endocrinology at Michigan State University, agrees that mindset is "very important" in the weight loss process. He cites an example of a patient with nonalcoholic fatty liver disease who repeatedly struggled to lose weight but failed until she read about fatty liver disease and its potential impact. "That was the click," he tells SELF. "Doctors should always look for what they think clicks and is important for the patient." [Read More](#)
